Education

JSS Academy of Technical Education — Noida, Uttar Pradesh
B.Tech in Computer Science Engineering (Data Science) — *2023 – 2027*

Experience

Data Science Intern — Mar 2026 – Present
GeeksForGeeks — *On-Site / Noida, India*

- Developed and tested end-to-end Python implementations for Data Science concepts including regression, classification, and clustering algorithms
- Built hands-on code examples covering feature engineering, model evaluation metrics, and ML pipeline design
- Benchmarked multiple ML approaches across datasets, documenting performance comparisons and optimization strategies

AI/ML Developer Intern — Dec 2025 – Present
NomadiQ — *Remote / India*

- Architected an end-to-end flight price forecasting pipeline using historical airfare, demand patterns, and booking trends across Indian/International routes
- Trained and optimized XGBoost and Random Forest models for predicting future minimum prices with business-focused loss minimization
- Reduced model MAE from 1500 to 350 improvement through feature engineering, hyperparameter tuning, and model optimization
- Designed Buy vs Wait decision engine comparing predicted future price with current price to generate actionable booking recommendations
- Evaluated model performance using MAE, MAPE, and SMAPE; improved pricing stability across high-demand routes

Projects

Multimodal Product Similarity Prediction | *Python, XGBoost, CLIP, Scikit-learn*

- Developed multimodal regression framework combining 512-D CLIP image embeddings, 256-D TF-IDF+SVD text features, and structured brand embeddings for 75,000+ products
- Achieved 27.4% SMAPE, improving accuracy by 43% over baseline single-modal models via unified 802-D feature space
- Reduced text dimensionality by 95% and memory usage by 70% through optimized NLP pipelines and SVD compression
- Automated end-to-end training pipeline enabling 4.2× faster retraining and reproducible experiments

Generative AI Travel Itinerary Planner | *Python, Groq API, Hugging Face, Streamlit*

- Built GenAI system generating personalized travel itineraries using LLM prompt engineering and structured response formatting
- Optimized prompts using few-shot and role-based techniques, improving itinerary relevance by 30%
- Developed interactive Streamlit interface enabling dynamic regeneration, location filtering, and recommendation refinement

Technical Skills

Languages: Python, SQL
Generative AI / Agentic AI: LangChain, LangGraph, CrewAI (Multi-Agent Systems), Prompt Engineering, LLM Applications, Hugging Face, Groq API, Embeddings, RAG (Retrieval-Augmented Generation), Vector Databases (FAISS, Chroma)
Machine Learning: Regression, Classification, Random Forest, XGBoost, SVM, K-Means, Model Evaluation (MAE, MAPE, SMAPE, ROC-AUC)
Deep Learning: ANN, CNN, RNN, LSTM, GRU, TensorFlow, Keras
NLP / Generative AI: TF-IDF, Word2Vec, Embeddings, Prompt Engineering, Hugging Face, Groq API
Tools: Scikit-learn, Streamlit, Git, GitHub, Jupyter Notebook
Data Science: EDA, Feature Engineering, Normalization, GridSearchCV, Time-Series Validation, Hyperparameter Optimization
